

Faraday Lecture

"Stardust Musings and Memories"

This year's lecture will be presented by David D'Emilio, veteran chemical demonstration expert at the University of Pittsburgh Chemistry Department. Dave will perform a series of engaging and intriguing demonstrations, specifically designed to educate the audience about the transition from the Big Bang, to stars, to stardust, to cosmic dust, ...to atoms! Audience volunteers will become part of his rocket launch crews, hydrogen and oxygen balloons will explode to make water, and the connection between stardust and colorful fireworks will be explained using prisms and diffraction gratings.

Tuesday, November 19 at 7:00 PM
Soldiers and Sailors Memorial Hall

Free and open to the public!
